# ÖGON The creator of aluminium wallets

Aluminium wallets, a concept born in Sweden.

The creator of the brand, Thomas, lived many years in Sweden. It is there while living in Stockholm that he first got the idea of a hard case wallet inspired by cigarette cases.

It was instantly a worldwide success on the leather goods market.

**i** *Fun fact :*

*Ögon is a swedish word that means the «eyes». The idea was to create practical wallets that were also beautiful.*

# Eco-friendly production RFID protection

Since the beginning, ÖGON has always been an eco-friendly company, concerned about its environmental impact and has always been ethical.

We have banned polluting materials and our productions are green with no waste disposal into nature.

Our constant concern for quality allows us to produce durable objects, that can be kept for many years.

ÖGON was the first to offer wallets with RFID protection.

The aluminium protects cards from breaking and demagnetization but it also creates the perfect Faraday cage.

The protection against data theft and contactless payment fraud immediately became part of our DNA and all our products are guaranteed «RFID Safe».

## Made in France

It is in Evreux, in our workshop and warehouse that we create and assemble our wallets since 20 years.

# Finishing Anodized aluminium

Aluminium is a material with multiple virtues, it is durable, stainless and incredibly light.

We have developed a specific alloy that gives our wallets exceptional quality.

This secret recipe is made of recycled aluminium, to reduce the environmental impact, and also guarantees a very low lead concentration, in accordance with European standards.

To obtain the deep and vivid colors, we use a specific process which allows the color pigments to be integrated into the mass by electrolysis.

**i** *Fun fact :*

*Aluminium complies with food standards. It is naturally anti-bacterial and very easy to clean.*

# Finishing Matt Paint

We have reworked the appearance of the aluminium shells by using «powder paint», which combines a deep matte finish with a sanded texture that is pleasant to the touch.

*« This process consists of applying a powder, then baking it in the oven which creates a color that is more resistant to shocks and scratches than standard paint.*

*This ecological process is solvent-free and without disposal into nature. »*

# Collaboration

# Keith Haring™

Keith Haring (1958-90) was one of the most renowned of the young artists, filmmakers, and performers whose work responded to urban street culture of the 1980s. Inspired by the graffiti artists whose marks covered the city's subway cars, Haring began to draw in white chalk over the black paper used to cover vacant advertising panels.

Smart Case V2 & V2L Extra capacity

Slider

# Finishing Laser Engraving

It is in our workshops in Normandy that we create these designs and engrave them. The marking in the mass is of extreme quality and will resist all attacks, even time.

workshops*

# Collaboration Paiheme

An exclusive design by Paiheme!  
French artist with a vintage  
Japanese style.

Paiheme is an artistic director, illustrator and graphic designer from Caen, Normandy (France).

His work reinterprets the codes of vintage and Japanese advertising of the 1960s in a contemporary way.

He also sometimes adds a bit of pop culture such as mangas or animes to his creations.

A woman with shoulder-length brown hair and round sunglasses is shown from the chest up. She is wearing a white t-shirt with thin blue horizontal stripes. She is holding a light-colored wooden wallet in her hands, which is open to reveal several credit cards. The background is a bright, sunny outdoor setting with lush green trees and a clear blue sky.

# Wood effect
